

## The Importance of Glass COE

Glass pieces used on the same piece must have the same C.O.E. rating. C.O.E. stands for "coefficient of thermal expansion" and relates to how the glass expands and contracts due to temperature changes. Different glass has different C.O.E. numbers. If the glass used for fusing does not have the same C.O.E. number, it will crack and break. To be guaranteed compatible C.O.E. glass, buy glass from the same source and check the label to be sure that the C.O.E. is the same. AMACO® glass is all COE 90.

## 6" x 6" Square Glass Sheets — COE 90, 1/8" thick

- 40011K Clear
- 40012M Cobalt Blue
- 40013N Tangerine
