Superior Quality

AMACO® kilns are the best constructed kilns made today. The welded steel frames and shells mean unsurpassed durability. We use only top quality Kanthal A-1 element wire which is secured in the firebrick for extended life. AMACO® kilns typically last 30 years or more.

Optimum Safety

AMACO® kilns are UL and CSA listed for meeting the rigid standards of safety with regard to fire and casualty hazards for the U.S. and Canada. Each AMACO® kiln combines insulated firebrick and block insulation to keep surface temperature low, minimizing burn risk making them ideal for classroom use.

Look for these safety symbols before you buy! Not all ceramic equipment is UL and CSA listed.

Highest Efficiency

The superior insulation used in AMACO® kilns means greater firing efficiency and lower electricity costs by high volume users such as professional potters or classrooms. In addition, Select Fire™ computer controlled firing provides greater accuracy with less electricity than conventional kiln controls.

George Debikey unloads pieces from an AMACO® AH-25 kiln.

Maximum Convenience

AMACO® exclusively uses corrosion-resistant terminal connectors which facilitate easy element replacement so there are no wires to cut or solder. All AMACO® kilns can be ordered with the Select Fire™ computer controller for accurate, simplified firing.

Outstanding Service

AMACO® kilns are covered by an unsurpassed FIVE YEAR WARRANTY. Compare this warranty to our competitors before you buy. AMACO® also supplies guaranteed replacement parts for any AMACO® kiln no matter how old it is.

Tania Wineglass, Indianapolis, Indiana, relies on an AMACO® Select Fire™ Controller when she fires ceramics at Ben Davis High School.

Stretch Your Art Budget in 2008

Receive a Gift of up to \$275 in AMACO® Glazes, FREE Freight
